

## POLARIZERS

These optics are specifically designed to change or measure the state of polarization of incident radiation in the UV, VIS, IR, or NIR spectral ranges.

## CALCITE POLARIZERS

These calcite polarizers provide extremely pure linear polarization in the 350 nm - 2.3 mm spectral range for both low-power (in order of increasing field of view, choose from Glan-Taylor, Double Glan-Taylor, or Glan-Thompson Polarizers) and high-power (Glan-Laser Polarizers) applications.
